

## Measuring for a Floodtite Door Panel

Ensure you select the correct width of Door Panel.

As the Floodtite Door Panel is designed to be fitted to the door frame, the correct width of Panel should be determined by measuring the span between the brickwork of each doorway to be protected (as illustrated).

Floodtite Door Panels are most suitable for inward opening doors. All panels will fit smaller doorways and outward opening doors by having the fixing frame fitted directly onto the wall.

If you are unsure about sizes, please contact our technical helpline on 0845 0941 281 or email [info@crocodilefs.co.uk](mailto:info@crocodilefs.co.uk) and where possible include photographs.
